CarryKart

One Platform. Every Shipment.

Consumer logistics orchestration platform — discover, compare, book, pack, and track personal shipments in a single app.

Source: CarryKart Strategic Overview + New growth analysis for the student market

Compare, Book, Track — All in One App

CarryKart is not a courier company — it owns no trucks. It's the discovery and orchestration layer that lets a user compare transport providers (DTDC, India Post, Porter, Blue Dart, regional players) side by side, add packaging material or professional packing at checkout, and follow the shipment door-to-door — replacing a fragmented, multi-app hunt with one guided flow.

Grow Transactions Through Marketplace Liquidity

NORTH STAR METRIC

Successful Goods Deliveries per Active User

Measures conversion of active users into completed shipments and drives repeat usage.

1

Customer Growth

- Increase user acquisition
- Improve retention
- Increase repeat bookings
- Encourage referrals

2

Marketplace Growth

- Onboard transport providers
- Expand packaging vendors
- Grow packing partners
- Expand geographic coverage

3

Revenue Growth

- Transport commissions
- Packaging & packing commissions
- Featured listings
- Premium services & subscriptions (future)

Five User Types, One Standout Segment

Selected Segment: College Students

The largest and most logistics-intensive segment in personal relocation — and today, the most underserved by existing courier and moving apps.

From Fragmented Chaos to One Seamless Flow

Can't compare providers

Aggregated price & rating comparison across DTDC, India Post, Porter, Blue Dart, and regional carriers — quoted side by side before booking.

No packaging on hand

Integrated packaging marketplace (boxes, bubble wrap, tape) added in the same checkout as the shipment.

Zero shipment visibility

Live end-to-end tracking, from doorstep pickup through in-transit to delivery.

Missed or failed deliveries

Automated sender & receiver notifications plus a built-in rescheduling flow instead of a stalled shipment.

Where CarryKart Sits in the Market

	CarryKart	The Aggregators	Asset-Heavy Legacy
Primary Purpose	B2C Personal Relocation	B2B E-commerce	General Post/Parcels
Own Transport Network	✓ Yes	✗ No	✓ Yes
Provider Comparison Tool	✓ Yes	✗ No	✗ No
Integrated Packaging Marketplace	✓ Yes	✗ No	✗ No

CarryKart is not a courier company. It aggregates providers like DTDC, India Post, Porter, and Blue Dart the way Zomato aggregates restaurants.

Turning the Semester Calendar Into a Growth Engine

4.5 Cr+

students in Indian higher education (AISHE, 2023–24)

Hostel move-in and move-out happens on a fixed academic calendar — a predictable, hyper-local demand spike twice a year that most logistics apps never plan around.

1 Campus Batch-Move Partnerships

Tie up with hostel wardens & PG owners for fixed move-out weeks; batching pickups lowers per-user cost and locks in provider supply during peak demand.

2 CarryKart Student Pass

College-email verified plan: zero packaging markup + discounted commission on the first 2 shipments each semester, funded by higher repeat-booking lifetime value.

3 Roommate Split & Referral Loop

Split one shipment's cost across roommates in-app and reward both sides of a referral — hostels are dense social graphs, ideal for peer-to-peer virality.

4 Semester-Break Micro-Storage

Partner with local storage vendors so students going home can store instead of ship, then re-book delivery next term — turning one lost transaction into two.

Why CarryKart Wins the Student Segment

- One app bundles provider comparison, packaging, and live tracking — no competitor offers all three today.
- College students are India's largest, most underserved, highest-frequency relocation segment (4.5 crore+ enrolled, AISHE 2023–24).
- The academic calendar is a built-in, predictable growth lever — batch moves, a Student Pass, and referral loops turn it into recurring revenue.

One Platform. Every Shipment. Every Semester.
